Windows 8 animated gif wallpaper

The built-in wallpaper switch from Windows is correct, but not spectacular. If you want to strengthen your rotating wallpaper, John's Background Switcher gives you tons of options to do it, and at no cost. John's Background SwitcherPlatform: Windows Price: Free Download PageFeaturesPeriodically changes the background image on your computer over a specified intervalCan choose from a folder on your computer, Users or tags Flickr, Facebook, Vladstudio wallpapers, all RSS feeds (including sites like DeviantArt, Photobucket, LOLCats, and more), Smugmug, Picasa, Google Image Search, and tons more wallpapers placesView individually or as a set of instant albumsDeshier a calendarChange the Logo settings that determine how your backgrounds rotate, including stopping the rotator when you're on battery power, only switching to idle, and moreTurn off wallpaper drawing for certain areas on the screenSecuts client keyboardImport and export settings for an easy backupWhere it ExcelsSee the list of features above... its length tells you everything you need to know. John's background switch has more features than you ever thought you want from a wallpaper manager, including a ton that you probably won't even use. Yet once you've set it up, it stays out of your way, and it allows you to adjust the settings to prevent it from slowing down old or low power computers. Plus, you can capture images from any combination of a ton of web sources. If you're not at all dissatisfied with Windows' wallpaper management, this is the app you'll want to use. Where It Falls ShortYou may notice some stuttering as your wallpaper changes, if you can disable some settings that should mitigate this (at the cost of some nice discoloration transitions). My only real complaint, however, is its multiple monitor support. You can use John's background switch with multiple monitors, but you can't give him different image sources for each monitor, which is kind of a disappointment. It also doesn't allow you to choose an image for your Windows logo screen. It just uses any image is up next in rotation. Obviously, these are pretty nitpicky, but these are things I noticed from the start, and with a few small fixes, the program would probably be perfect. CompetitionThe most other programs, in my opinion, are not really worth watching. If you use multiple monitors, DisplayFusion will give you a little more control over each monitor, but it does not nearly as many online sources or super-advanced wallpaper options (plus it costs \$25). That said, if you use multiple monitors, it brings a ton of other non-screen features to your setup, including double taskbars, tons of keyboard shortcuts, window snapping, and more. But just to change the wallpapers, it's a bit exaggerated (not to mention overpriced). Also among the paid apps is Wallpaper Cyler, which for \$20 adds a few more things that you can nail to your desktop. You can create layouts with calendars, quotes, quotes, webcams, other wallpapers, RSS titles, and more at your desk, but why you use it instead of the incredibly beautiful Rainmeter is beyond me. Still, it's there if you want something different. Rainmeter is a powerful tool that allows you to create a beautiful heads-up screen rich in information... Read moreLastly, there are a few other managers who deserve to be mentioned just because of the wallpaper sources they support. If you're a big fan of InterfaceLIFT or wallpaperstock, you'll want to check out Wallpaper Juggler, which is simpler than the others, but can download wallpapers from our favorite wallpaper site (although John's Background Switcher can do it through RSS, too). Color Desker uses its own cache of pretty wallpapers, too, if you're not very picky. No one likes to look at a boring desk when they pull their computer every morning. Keep your... Read moreThere may be other wallpaper managers out there, but these are our favorites. Do you have one you're particularly in love with that we didn't mention? Share it with us in the comments. Lifehacker's App Directory is a new and growing directory of recommendations for the best applications and tools in a number of given categories. GIF sharing is becoming just as popular on Facebook as it is on other social networks (such as Twitter and Tumblr). People who post on social networks often use GIFs as a way to convey a reaction or summarize a message. GIF files are short, repeating images often taken from video clips. They can also be homemade animations or simply moving scinter images. Facebook has its own built-in GIF tool that you can use to easily search for and insert GIFs into your status updates and comment sections. The following instructions apply to both Facebook.com in a web browser and the official facebook app. Find the Create field at the top of your News Feed or on your profile. On the web, tap the three horizontal dots under the field and select GIF. On the app, tap What's On Your Mind (inside the field) and select GIF. Type a keyword or phrase into the GIF search field that appears. Alternatively, scroll through the trend GIFs that appear in the grid below the search field. When you find a GIF you want to use, click or tap it to insert it into your message. Please note that you can only reach one GIF at a time per post. You can always add an optional message before you insert the GIF into your status update. Insert GIFs into comments on Your friends is just as easy as inserting them into your own status updates - and you can do it both from the web and the app too. All you need to do is search for the GIF icon next to the comment field, then follow steps three and four above. Facebook also allows GIF viewing by manual sharing or download. This can be useful when you have a specific GIF that you want to share that you don't seem to find in Facebook's built-in GIF tool. There are many places to search for GIFs. Downloading them (and sometimes doing them) is easy. GIPHY (GIPHY) one of the best places where you can search for GIFs and trend GIFs in categories like entertainment, sports, holidays, memes, etc. It is currently known as the largest and most popular GIG search engine on the Web. Imgur is known for their GIF images, too, and many of them are the ones you can download directly from their app or website. You can browse the images through tags like funny, summer, uplifting, food, virtual reality, memes, and many others. Once you've downloaded a GIF that you want to share on Facebook, you can download it by selecting the camera icon in any status update or comment, just as if you were downloading a regular image file. Keep in mind that some online GIFs may be displayed on the web page, but are not technically available to download in GIF format, in which case posting the link via Facebook will not show your friends the GIF you want to share. You can tell if this is the case if you are trying to download the GIF and it has HTML or MP4 file extension instead of GIF. To avoid this, you need to keep clicking until you reach a download page where you see a GIF URL that you can copy or a download button. Another way to get you a great GIF to share with Facebook friends is by making your own, which is great for times when you quote a specific clip from a video. You can turn videos into GIFs, as well as make them from scratch, online or through programs like GIMP or Photoshop. Are you interested in making your own GIFs? Check out the best free gif maker apps. Once you've downloaded a GIF that you want to share on Facebook, you can download it by selecting the camera icon in any status or comment update field, just as if you're downloading a regular image file. If all you have is the URL of a GIF (i.e. it's not downloaded to your device), you can still post it as part of your Facebook status by adulating the link in the status box. Depending on the site on which it is hosted, Facebook must recognize that it is a GIF image and automatically insert it into your status update or comment. You can then build your status normally, and even clear the GIF link, and the image will still post. If you don't seem to upload the GIF to Facebook and have it displayed correctly, another option you might want to try is to save the GIF to an image hosting site and then share the link on Facebook. Just download your GIF from one of these websites, copy the link, and paste it on to instantly share the image. Online storage sites are also very useful if you like to choose from dozens (or hundreds) of your favorite GIFs. Instead of storing them all on your device, download them online and ask for them wherever you go. By Shawn Farmer Animation GIF images are treated like any other image when it comes to these images being synced to your iPhone. Your GIF animations must be stored in a folder, and this folder should be defined as your iTunes sync folder for photos. When you sync your iPhone with iTunes, the GIF animations recorded on your PC will be to your iPhone. You can learn how to get your GIF animations on your iPhone in a few steps. Connect your iPhone to your PC with its USB cable. Start the iTunes app on your PC. Click on your iPhone under the Devices section on the left side of the screen. Go to the Photos tab. Check the box next to Sync photos of: and then click the button to the right of it to select a sync folder. Click on the folder in which folder your animated GIF images are located. Click the Sync button at the bottom of the screen. Your animated GIF images will sync with your iPhone. Iphone.
